DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to the claims have been considered but are moot as new art has been found to read on the independent claims 22 and 25. As such prosecution returns to non-final status.

Claim Rejections - 35 USC § 103

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 22 and 25 are rejected under 35 U.S.C. 102(b) as being unpatentable over by U.S. Patent No. 4,228,961 to Itoh in view of U.S. Patent No. 4,581,675 to Kelly

As per claim 22, 25 Itoh discloses in Figure 2, means for supplying liquid (from (13) to an electrical discharge means ((1),(2)) including means for coupling the electrical discharge means (1) to a second higher potential (from (11)) and for coupling the outlet ((1) to a first, different, lower potential for causing an electric field to be generated at said outlet to produce a dispersion of aroma-providing droplets (disclosed is a use for coating, which, by default can have an odor to it) from liquid issuing from the outlet and for producing at the electrical discharge means ions to at least partially electrically discharge the dispersion (Col. 5, lines 5-34). However, Itoh does not teach the outlet being coupled to a potential via a resistance. Kelly teaches a three-electrode spraying device which teaches an outlet electrode (64) being coupled to a resistor (72) and where a discharge electrode (82) has a higher potential. As the endeavor of both is for

electrostatic spraying where discharge means have a higher potential than outlet means, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Itoh with the resistor of Kelly for the purpose of lowering a potential to the electrode.

Claim Objections

4. Claims 23,24, 26-29, 35-37,43, and 49-67 are objected to as being dependent upon a rejected base claim.
